Deadline Approaching for Drystack Conference Call for Papers

Warren, RI—The deadline to submit a proposal to speak at the International Marina Institute’s (IMI) Drystack Conference is only three weeks away. All submissions for the October 24–26, 2010, conference in Fort Lauderdale, Florida, are due by April 2, 2010. IMI, a training subsidiary of the Association of Marina Industries (AMI), uses its biannual Drystack Conference to combine educational programs, exhibits, and networking opportunities for marina professionals who wish to learn about current drystack technology while meeting with leading managers, developers, and vendors.

“We are asking for proposals for seminars on new developments in dry storage and regarding the latest technologies that support the industry,” says Kayce Florio, IMI’s training coordinator. “It is important for us to hear from professionals in the industry so we can put together an educational program that addresses relevant issues and current trends.”

IMI coordinators are seeking presentations pertinent to IMI’s audience, which includes internationally acclaimed marina-industry professionals, Certified Marina Managers, and marina managers, owners, and operators as well as companies that sell to and serve the marina industry.

Presentations can be designed for all levels of experience—from fundamental and intermediate to advanced topics. IMI asks that the information be timely, informative, and educational without overt company or product promotions. For more information, visit www.marinaassociation.org/training-and-certification.

The International Marina Institute (IMI) has been training and certifying marina personnel since 1986 and offers courses in Intermediate Marina Management and Advanced Marina Management. IMI also provides qualified members with the coveted Certified Marina Manager designation.

The Association of Marina Industries (AMI) is a nonprofit membership organization providing management training, education, and information about research, legislation, and environmental issues affecting the marina industry.
